

"Creating a special textbook on music theory for students with disabilities (blind) studying in universities and institutes opened by the state"

Ruziyeva Hosiyat Rasulovna

Bukhara State Pedagogical Institute,

master's degree in music education and art

Annotation: In this article, proposals were made to publish textbooks on the theoretical sciences of music in braille for students with disabilities, to carry out various interesting methods and news. Creating a collection of audios to make these tutorials easier to understand. In the textbook, thoughts and opinions about the ability to deliver in a short and concise manner are written.

Keywords: *Braille/style/handicapped/braille/system/unusual/educational/age/method*

Аннотация: В этой статье были внесены предложения издать учебники по теоретическим наукам о музыке шрифтом Брайля для учащихся с ограниченными возможностями, а также провести различные интересные методики и новости. Создание коллекции аудио, чтобы упростить понимание этих руководств. В учебнике написаны мысли и мнения об умении излагать кратко и лаконично.

Ключевые слова: *Брайль/стиль/инвалид/брайль/система/необычный/образовательный/возраст/метод*

Annotatsiya: Ushbu maqolada imkoniyati cheklangan o`quvchi, talabalar uchun brayl yozuvida musiqaning nazariy fanlaridan darsliklar chiqarish, turli qiziqarli metodlar va yangiliklar olib borish to`g`risida takliflar olib borilgan. Bu darsliklarni yanada yegilroq uslublar orqali tushunarli bo`lishi uchun audiyolar jamlanmasini yaralish. Darslikda qisqa lo`nda tarzda yetkaza olish to`g`risida fikr va mulohazalar yozilgan.

Kalit so`zlar: *Brayl/uslub/imkoniyati cheklangan/dolzarb/sistema/noodatiy/tahsil/yo`sin/metod*

The development of new Uzbekistan requires teachers and pedagogues, who are growing up like us, to introduce new systems and unusual methods in education. It is time to use new ideas, research and methods. It is necessary to develop textbooks and special training manuals for gifted but disabled students who are learning music, that is, (blind) students, so that they can get not only practical knowledge, but also theoretical knowledge. It is necessary to conduct work on it and apply it. This issue has been considered for many years, but it has not yet been fully implemented. There are such students in our university where they are currently studying. In order to make their studies easier, I brought them to such a topical topic. Most of the time, students study under the guidance of a teacher. They clarify the issues of knowledge and skills, which they do not understand and do not know, from their teachers. They said, "It's true, a scientist who learns what he doesn't know by asking...", but I believe that they should study theoretical knowledge themselves. Many famous musicians and singers passed away, but no one could replace them.

Performers and singers use their mobile phones and special radio equipment to listen to the musical legacy left by their teachers and memorize the songs they perform. This will be done whenever possible. Are these students only performers or singers? It is necessary to help them develop as theorists and art historians. The main basis of this issue goes back to the technique.

Because a typewriter, i.e. a computer, is definitely needed to reproduce textbooks. But the Braille writing machine is unfortunately limited. There are only 1-2 in certain countries and Uzbekistan. It is possible to produce many numbers of such complex writing by hand, but time is the supreme judge. In fact, in order to write in braille, it is necessary to have a person who knows this writing. In addition, the volume of braille writing is much larger than the number of pages in our Latin or other writing books. Because the writing in our normal 200-300-page book is twice as long as their writing, i.e. 400-500 pages, and carrying such a textbook is unfortunately difficult for them.

Textbooks worth 2-3 paras a day will tire them even more. Braille is one of the most difficult writings in the world to write and to read and even remember. Because the pressing of one dot has different readings and meanings.

Therefore, in this article, I believe that in the future, in the existing library of every educational institution, textbooks with braille should be made based on a special catalog for the blind. Looking deeper into this: music theory is mostly about rules and notes. These rules can be presented in short braille format and in audio format with a special voice for a detailed, clear, wider understanding of the student. For this purpose, you can add a voice note under the (QR) code symbol on the side of each note or rule. **For example:**

*** RULE!**

The main artistic tool in music is melody.

In the oral tradition (monody) styles of music, the melody is artistic is the only and complete musical expression of the image. Multivocal elements of harmony and polyphony in compositional directionstakes an important place.

- The approach in this order will be more convenient. After all, a light, compact training manual for the user, and materially, it will be far away from the increase of excess paper and expenses. Maybe even with fewer book pages, there will be more information inside. In other words, we need to help disabled people to improve their knowledge and advance, not to lag behind others.

We should bring innovations in educational programs so that the growing young generation, students who are hungry for knowledge, can study and gain knowledge from teachers like us. The highest task for every pedagogue is to educate his students to be more knowledgeable, to constantly seek and, if necessary, to make the lesson interesting through different approaches. Therefore, the status of a master has a lot of tasks and burdens. Each graduate should prepare a necessary, not yet implemented program and confirm that it is useful to the future reader.

I believe that it is necessary to justify the demand and great trust placed on the growing cadres and to justify the funds allocated for the education of young people who are hungry for knowledge. Paying special attention to the development of new Uzbekistan, we should start from one side. For this, we need to search more and realize it by setting big goals for ourselves. The goal is clear-cut development. there will be growth.
